On command the candidate shall rapidly exit the Immediately Dangerous to Life or Health (IDLH) environment by a restricted passage prior to air depletion. The evaluator may stop this evaluation at any time due to an unsafe act. Do you have any questions?

Evaluator Instructions: Examples of controlled breathing techniques could include staying calm, assuring good seals and no leaks, skip breathing or humming, etc.

*An emergency call for assistance must be initiated using a radio, pass device, and possible additional means to alert others to a firefighter's need of emergency assistance. This should also include the term MAYDAY, firefighter down, or comparable language as determined by the program director (AHJ).

Examples of attempts to correct the problem could include hand goes to the face piece and regulator, checking by-pass valve, uses bypass or cylinder valve to control air flow (depending on free flow or no flow as needed), assuring the air cylinder is on, etc.

Warning: No emergency breathing technique is recognized by manufacturers, IFSTA, ANSI, or any other regulating agency. These procedures should be used only as a last resort in life threatening situations. **5 MINUTE TIME LIMIT.**

The evaluator may stop this evaluation at any time due to an unsafe act. Do you have any questions?

Evaluator Instructions: *This skill is not intended to prevent a candidate from partially or completely removing the backpack assembly, as an emergency procedure only, to exit through a restricted passage, without removing the face piece or compromising the air supply in any manner.

- Failure to assist in the removal of the victim
- Failure to maintain contact with the team member physically and verbally

Candidate should be given areas to search, generally not to exceed about 300-400 square feet, but must consist of multiple room areas. Room areas may be simulated using false or simulated walls, etc. Ladders, if used are properly placed based on the conditions given. Candidate are not required to perform a ladder rescue to successfully complete this skill. A rescue dummy of a minimum of 110lbs. must be used. 4-10 FIRE ATTACK - INTERIOR	NFPA 1001 4.3.10
------------------------------------	-------------------------

Candidate Instructions: Attack an interior structure fire operating as a member of a team, given an attack line, ladders when needed, PPE, tools and an assignment, so that team integrity is maintained, the attack line is deployed for advancement, ladders are correctly placed when used, access is gained into the fire area, effective water application practices are used, the fire is approached correctly, attack techniques facilitate suppression given the level of the fire, hidden fires are located and controlled, the correct body posture is maintained, hazards are recognized and managed, and the fire is brought under control. The evaluator may stop this evaluation at any time due to an unsafe act. Do you have any questions?

Evaluator Instructions: Only the candidate operating the nozzle will be evaluated during each evolution.

*The candidate should be proficient in the various attack approaches for room and content fires at three different levels (at grade, above grade, and below grade). Maintenance of body posture in the standard refers to staying low during initial attack, protecting oneself from falling objects, and otherwise using common sense given the state of the fire's growth or suppression. Live fire evolutions must be conducted in accordance with the requirements of current edition of NFPA 1403. It is further recommended that prior to involvement in live fire evolutions, the candidate demonstrate the use of SCBA in smoke and elevated temperature conditions. In areas where environmental or other concerns restrict the use of Class A fuels for training evolutions, properly installed and monitored gas-fueled fire simulators might be substituted.

Candidate shall at no time advance an uncharged hose line into the unprotected live fire area and shall not make entry until nozzle pattern and flow have been verified. These actions are critical performance safety criteria.

Scenarios:

1. Ground floor single room fire attack from interior hallway.
2. Ground floor two rooms fire attack form interior hallway.
3. Second floor one room fire, access from interior stairway.
4. Ground floor single room fire, enter from exterior second floor (simulates basement fire).
5. Second floor one room fire, attack from ladder via window.

TIME LIMIT IS BASED ON THE AMOUNT OF TIME REQUIRED TO COMPLETE A LIVE FIRE EVOLUTION AS PART OF A CREW.
